## TL-D Standard colours

Fluorescent lighting is efficient and economical. The efficacy (lumen/watt) of all fluorescent lamps is high compared to most other light sources.

Different luminaires are available for various purposes.

TL-D lamps are low-pressure mercury discharge lamps with a clear tubular 26 mm envelope.

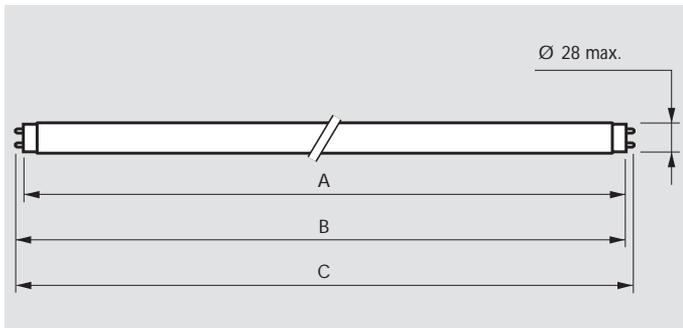

The tube wall is internally covered with a mixture of fluorescent powders.

TL-D Standard colours have a moderate colour rendering index (C.R.I. 50 - 75). Especially the red part of the spectral power distribution is moderately covered by standard colours.

TL-D Standard colours are mostly used in applications where colour rendering is not an important parameter.

The efficacy of TL-D Standard colours is lower than TL-D /80 colours.

The colour designation of TL-D lamps creates a certain atmosphere. It varies from warm-white to cool daylight. The colour designation is determined by the colour temperature of the lamp.
